

## Habitat & Long Habitat Light & Wiring Harness Set

**Design Shelter custom fit electric light & wiring harness sets** provide our customers with the ability to enjoy modern electronic conveniences inside the shelter proper – in an always dry interior environment. The heavy duty switch controlled, ruggedized and weather resistance fluorescent light kit provides ample light to the inside of the shelter at all times.

The custom designed fluorescent light and wiring harness set has been specially designed to integrate easily to the interior side of the shelter mainframe. Our T-12 dual bulb ruggedized and weather resistant light enclosure works off a switch at each door provided and every electric receptacle supplied with the wiring harness kit is ground fault protected.

Power must be supplied to the wiring harness kit either through a direct electrical feed from external sources or through that of a portable fuel fired electric generator.

## Habitat & Long Habitat Insulated Cover Sets

**Design Shelter Habitat and Long Habitat insulated cover sets** compliment the shelter by providing a reflective radiant heat barrier and air space between the interior of the shelter proper and the exterior vinyl cover set. A layer of air bubble pack is sandwiched between two layers of aluminium foil with a thin layer of vinyl quilted to the inside of the insulated cover set. A typical R value of 3 is misleading as our insulated covers work effectively well in cold climates by keeping radiant heat in and keeping the sun's radiant energy out in hot climates. Design Shelter customers' time and again compliment the surprising efficiency and remarkable insulating qualities of the optional insulated cover sets.

The interior white colour of the insulation reflects back all available light for a fresh, bright and roomy feel to the inside of the shelter proper. The lightweight quilted vinyl fabric also provides the occupants with a sense of comfort and coziness inside. Furthermore, the durable interior facing vinyl layer allows easy cleaning to maintain the bright white finish.

The Design Shelter insulated cover set is a completely separate cover from that of the exterior vinyl cover set. This allows our customers the added flexibility of installing just the exterior cover if desired or having both cover sets on at the same time. Stay warm or cool inside your Habitat or Long Habitat portable shelter with the optional insulated cover set from Design Shelter Inc..
